Also wondering how. 4 This Furnace was made in 1986 I am also looking for a parts manual. We moved into our 1969 built bungalow in the spring of 2016. Everything was in order except our furnace had been installed in the spring of 2000. We thought wed go through the summer with the unit in central air mode and then see how it would perform during our first winter. This unit is a great performer.

Two summers and one winter with no problems! Im not a believer in spending money on service, but that just came back to me in a very inconvenient way. The unit would not keep running. It was our first cold day of the fall. It was clogged with all sorts of gunk, but after a good cleaning the furnace was back to normal. Hope this great unit trudges on for another few years. So far so good! Thanks Bryant for making such a solid, reliable unit. Date created 20160203 Bryant furnace lawsuit My mother had a Bryant 90 Plus furnace that kept tripping the flame roll out switch. mercedes 190e. The engineer tried to cut corners and installed a secondary heat exchanger that was plastic coated instead of using a stainless steel exchanger this has since been changed back to stainless in all new models. Keep in mind, Bryant will not own up to this as a recall, you must mention the lawsuit from the U.S. Go online to look up the model numbers involved in the suit, call Bryant Carrier Corp. and give them your info. You must use a local contractor that deals with Carrier equipment and they will get the free secondary heat exchanger and 4 hours labor from Carrier. You should not have to pay any extra unless it goes beyond the 4 hours which it most likely will, youre essentially dismantling the furnace. To get you by until the furnace man comes, crack the main manual gas valve back slightly to prevent trip outs on the limit, this will also help to reduce the temperature and that plastic burning smell. Of course you wont be at full Btus, but you will have heat what is happening is the plastic is warping on the metal heat exchanger causing a plugged condition. The furnace has a low and high fire position and when it goes into high fire it will trip out if too much gas is entering the chamber because of the plugged exchanger.

Furnace Unit was installed in 2008 and failed in 2013, just a week short from warranty to expire. Total breach of contract, but no one seems to care. Had a previous furnace for over 20 years with no failure of any component. Stay away from this brand, if you can. Expecting to replace it yet again as we've passed the 8 year mark. The blower starts to make a racket for a day or two and then the blades just fly off. Clearly inferior materials and cheap spot welding. We've never had blower issues like this with other brands Lennox and Carrier, twice as old as this. We contacted Bryant after the last drum failed and their response was, in essence, so what, we think they're fine. Date created 20111106 Horrible furnace I own a Bryant model 350MAV which is only 11 years old, the unit was installed by a professional HVAC company and after the 5th year, I started having problems with it, first I had to change the inducer blower motor, then I had to change the control board, and now my secondary heat exchange unit is completely rusted and discharges a very foul odor and rust in the utility sink. For an 11 year old blower, I have pretty much replaced every piece of equipment that needed to be replaced. I changed the inducer fan once, the ignitor twice, the limit switch once, the fan control board module 3 times twice for lightning strikes and cleaned the flame sensor 2 or 3 times when it got too dirty to let the furnace run, and tried to oil the fan motor. No place to oil it. I will just change it when it goes, which should have been 10 years ago. I do all the work myself because it is so simple. I run the fan almost all the time to keep the heat/cool even. If it croaks tomorrow, I will put another one in just like it.

It is a little short on the 95 degrees plus days, but we only have a handful each year. I need a new 2.
